

Total Hydrocarbon Analyzer, Model 51i

Utilizing Flame Ionization for detection of THC

Key Features

- Flame Ionization Technology
- Adjustable Ranges
- Real Time correction of THC Readings

The Model 51i Total Hydrocarbon (THC) Analyzer combines proven Flame Ionization Detector (FID) technology, easy to use menu-driven firmware, and advanced diagnostics to offer unsurpassed flexibility and reliability. The Model 51i is available in Low Temperature and High Temperature versions.

The Model 51i uses a flame ionization detector, or FID, to measure organic gases and vapors. Flame ionization is a well-known technology that has been used in laboratories and industry for many years. Flame ionization detectors are highly efficient; they provide a wide linear range and sensitive detection of organic compounds.

This state-of-the-art gas analyzer also offers features such as an ethernet port as well as flash memory for increased data storage. Ethernet connectivity provides efficient remote access, allowing the user to download measurement information directly from the instrument without having to be on-site.

You can easily program short cut-keys to allow you to jump directly to frequently accessed functions, menus or screens. The larger interface screen can display up to five lines of measurement information while primary screen remains visible.
